01

Welcome to the Guangzhou floor

Every record in this system starts on your bench. What you type is what four other departments work from.

MISSION

What this desk is for

You take cargo in from suppliers, weigh it, photograph it, register it, print the code that travels on every box, and put it on a flight. That is the whole job, and it is the most important one in the company — because **nobody downstream can correct what you get wrong**. Dar checks against your record. Finance bills from your weight. The customer tracks what you typed.

--

YOU CREATE

The record everyone works from

Registering mints the tracking number, one QR label per box, the first line of history, and the loading table it belongs on.

YOU NEVER SEE

What any of it costs

No price, no invoice, no balance — never sent to your screen at all. A rate box on the registration form would put pricing in the hands of whoever is holding the scale.

--

YOUR DAY	WHAT IT MEANS
Read the floor	Open Home and work the attention panel from the top.
Ring back requests	Website bookings are not cargo until boxes are on your counter.
Register cargo	Weigh, photograph, type, save. The screen you use most.
Print and stick	One code per physical box, attached before it leaves the bench.
Seal and dispatch	Waybill, airline, date. This cannot be undone.

What you may and may not do

YOU MAY

Create and correct

Register cargo · print QR labels · correct your own entry while it is still in China · delete a duplicate with a written reason · open, load, seal and dispatch a loading table · edit the customer book · switch the interface language whenever you like.

YOU MAY NOT

Money, scanning, releasing

See any price · scan a box (that is Dar's) · receive an arriving flight · release cargo to a customer · raise a claim · edit or delete cargo that has already left China.

THE ONE THAT CATCHES EVERYONE

Once a loading table is sealed and dispatched, you can no longer edit or delete any cargo on it. The screen tells you: **“This cargo has already left China. Ask management to correct it.”** Check your numbers while the boxes are still in front of you.

”

“

02

Signing in

One address, one account, and the language switch that makes the whole system Chinese.

The login screen

target-epress.vercel.app

Open the address in any browser — phone or computer. Type the email your manager gave you and your password, then press Sign in. If the password is refused twice, ask your manager to reset it rather than guessing; repeated failures are recorded.

The sign-in screen, before there is a session.

1 Email

Your work email, e.g. china@targetexpress.co.tz. Not a personal address.

china@targetexpress.co.tz

2 Password

Set by management. Change it from your Profile once you are in.

“ ”

3 Sign in

Takes you straight to your own department's home. There is no department to choose — the system knows who you are.

TIP

Never share an account. Every registration, every label printed and every dispatch carries the name of whoever was signed in.

Switching to Chinese

Sidebar → English /

Your account opens in Chinese already. The switch sits at the bottom of the sidebar, above Sign out. Press and every screen, button, message and date becomes Chinese; press **English** and it all goes back. Your choice is stored against you, not the computer — so the bench machine in the morning and your phone in the afternoon both remember it.

English

The language switch, bottom of the sidebar.

1 English /

Each label is written in its own language on purpose, so you can find the one you want even when the screen is in a language you cannot read.

CAREFUL

What you **type** is not translated by this switch. If you write a cargo description in Chinese, the system keeps your Chinese exactly as written and shows Dar an English rendering beside it. Neither desk is ever handed the other's language.

03

Your home screen

The system writes your morning to-do list. Read it from the top.

Home, section by section

/app/dashboard ·

This is the first screen every morning and the one you return to between jobs. Nothing here is decoration — every number is something you can act on.

The Guangzhou home screen, reading in Chinese.

- 1 The greeting banner**
 Your name, the department badge, and both clocks — China time and Tanzania time. The clocks matter: a flight time quoted in the wrong one is a missed flight.
- 2 Today's floor figures**
 Cargo registered today, weight taken in today, labels printed today. A quick check that the day is moving.
- 3 Quick actions**
 The five things this desk does most, one press away: Receive cargo, Load a batch, Shipments, Issues & Claims, Reports.
- 4 Needs your attention**
 Your job list, written by the system. Consignments with no photograph, batches left open too long, cargo waiting too many days. **Work it from the top** — it is ordered by what costs the business most.
- 5 The sidebar**
 Everything you can reach, grouped by the kind of work. Explained in full in the next section.

CAREFUL

A consignment with **no photograph** is always the most urgent row. It is registered but has nothing to argue with — if Dar reports it damaged, there is no picture of what it looked like when it left you.

04

The sidebar, menu by menu

Nine doors. What each is, why it exists, and when you should be in it.

Every menu explained

MENU	WHAT IT IS, AND WHEN TO USE IT
Home /app/dashboard	Your morning starting point and the attention panel. Open it first, and again whenever you finish a job.
Search /app/search	Find any consignment by tracking number, customer name, phone or description. Use it when someone asks 'where is my box'. “ ”
Requests /app/requests	Booking and pickup requests from the public website. Ring each person back and move the status along. A request is not cargo.
Receive Cargo /app/cargo/new	The registration bench. The screen you will spend most of your day on.
Batches /app/batches	The two permanent loading tables — Guangzhou and Hong Kong — plus the Seal & dispatch panel. — —
Shipments /app/shipments	Everything you have ever registered and where it has got to. Read-only history.
Customers /app/customers	The customer book. The phone number is the identity — one number, one customer. — —
Issues & Claims /app/exceptions	Cases raised against cargo you loaded. Nothing pushes these to you — open it at the end of every day. — —
Reports /app/reports	Your own numbers: registered, flown, still standing, photograph compliance. No money, by design.

05

Every screen in detail

One chapter per screen: the picture, every control, and why it is there.

Receive Cargo – the registration bench

/app/cargo/new ·

Five sections, worked top to bottom. The system does the routing, the batch assignment and the price on its own — your job is the customer, the goods, the scale and the camera.

The screenshot shows the '收货登记' (Receive Cargo Registration) form. The interface is in Chinese. On the left is a sidebar with navigation links: 首页 (Home), 货物 (Cargo), 搜索 (Search), 客户申请 (Customer Application), 收货登记 (Receive Cargo Registration), 运单 (Waybill), and 批次 (Batch). The main content area has a title '收货登记' and a subtitle '登记到货货物。系统自动判断航班、批次和价格。' (Register incoming cargo. The system automatically judges flight, batch, and price). Below this is a section '1. 客户' (1. Customer) with a subtitle '以前发过货的客户可以直接查到。没有就登记一次，以后就在' (Customers who have shipped before can be found directly. If not, register once, and then it's in). There is a search bar with the placeholder '查找客户' (Find customer) and a button '新客户' (New customer). Below the search bar is a label '按姓名、唛头、电话或客户编号搜索' (Search by name, shipping mark, phone, or customer number). Five red circles with numbers 1 through 5 are overlaid on the form: 1 is on the '1. 客户' title, 2 is on the subtitle, 3 is on the search bar, 4 is on the '新客户' button, and 5 is on the search label.

— sections 1 and 2 of the registration form.

— 1 2

1

1. Customer

Find an existing customer, or create one. Search by name, shipping mark, phone or customer code.

2

2. Find / New

Always search first. A customer entered twice is two histories, two balances, and a phone call to sort out.

3

3. Search field

The phone number is the surest match. Names are typed differently by different people; a number is a number.

4

4. 2. Cargo category

One choice, and the system works out the airport and the price from it. Normal goods, Electronics, or Liquid & special goods.

5

5. Route

Shown, not chosen. Electronics normally fly from Hong Kong; everything else from Guangzhou. The category decides it.

NEVER DO THIS

Weigh before you type. A weight typed from memory is the number the customer is billed on. At least one photograph is required by the server, not just by the form — the save is refused outright without one.

Batches – the loading tables

/app/batches ·

Two permanent tables, one per airport. Cargo lands on the right one automatically when you register it. Read the four tiles before you seal anything.

The Guangzhou and Hong Kong loading tables.

1 Guangzhou table

Normal goods and liquids. Cargo waiting, total weight, customers, and the oldest piece on the table.

2 Hong Kong table

Electronics. Same four figures. Assignment is automatic — you should never have to move a piece between tables.

3 Seal & dispatch

Waybill number and airline are both required, plus flight, departure date and expected arrival. This moves every piece onto the flight at once.

NEVER DO THIS

There is no un-dispatch. After sealing you can no longer edit or delete any of that cargo. Read the table one more time first — the oldest-piece figure and the misroute flag are there precisely for that last look.

Search – finding one box

/app/search ·

Four ways in: a tracking number, a customer name, a phone number, or the carton reference off the packing list. Partial matches work — you do not need the whole thing.

The shared search screen.

1 What you can type

TX-000125, a carton reference like GZ/26-28-7, part of a customer's name, or a phone number in any of the forms people write it.

TX-000125 GZ/26-28-7

2 What you will not see

No prices and no camera scanner. Scanning belongs to the Dar counter; this desk prints labels and never reads them.

Requests – the website queue

/app/requests ·

Booking and pickup requests submitted on the public site. Ring each person, agree what is happening, and move the status: pending, contacted, scheduled, completed — or cancelled.

1

A request is not a shipment

It can never become one by itself. Cargo is registered when the boxes are physically on your counter and somebody has weighed them.

Customers – the book

/app/customers ·

Every customer who has ever shipped with us, newest first. Created automatically the first time cargo is registered against a name or number.

China Warehouse

English 中文

1

Search before you create

The phone number is the identity. Creating a second record for the same person splits their history in half and neither half is right.

Issues & Claims

/app/exceptions ·

Cases raised against cargo you registered. You cannot open, approve or close a case — you answer one question, better than anyone else can: **was it loaded in Guangzhou?** Your photographs, your weight and your carton count are the evidence.

China Warehouse

English 中文

CAREFUL

Nothing pushes these cases to you. The notifications go to Customer Care, Finance and management. Make opening this page part of the end of every day.

Reports – your own numbers

/app/reports ·

Registered, flown, still standing, and the photograph compliance ring. Change the period at the top. There is no money on this report, by design — warehouse staff are measured on cargo and time.

06

The complete journey

One box, from a supplier in Guangzhou to a customer's hands in Dar es Salaam.

Fifteen steps, five departments

07

A worked example

One real consignment, followed all the way through.

TX-000042 · shoes for John Peter

TX-000042 · John Peter

CUSTOMER	TRACKING	WEIGHT	CARGO
John Peter	TX-000042	3.6 kg	Shoes

STAGE	WHAT HAPPENS, AND WHO DOES IT
At your bench	John's boxes arrive. You search 0764 197 748, find him, pick Normal goods, weigh 3.6 kg, count 2 cartons, type , take two photographs and save. The system creates TX-000042 and two labels: TX-000042-P1 and -P2. John “ ” 0764 197 748 TX-000042 3.6 2 -P2 TX-000042-P1
Labels	You print both stickers and attach one to each box before they leave the bench.
Loading	Shoes are normal goods, so it lands on the Guangzhou table automatically.
Dispatch	You seal the table with waybill 176-44821905 on Ethiopian Airlines ET605. TX-000042 is now beyond your reach. 176-44821905 ET605 TX-000042
Dar	Both boxes are ticked in against the manifest. The system prices it: 3.6 kg × USD 13.50 = USD 48.60. 3.6 × 13.50 = 48.60
Money	Finance confirms the price, Customer Care rings John, John pays, Finance verifies and issues pickup note PN-2026-000042. John John PN-2026-000042
Collected	John comes to the counter. The clerk scans one carton, both boxes are accounted for, a handover photo is taken, and TX-000042 is delivered. John TX-000042

08

When things go wrong

The mistakes that actually happen here, and what to do about each.

Common mistakes

THE MISTAKE	WHAT IT CAUSES	WHAT TO DO
Weight typed from memory	The customer is billed on a number nobody measured.	Re-weigh and correct it while the cargo is still in China.
One label on two boxes	Two boxes with one identity — nobody can say which went missing. — —	Reprint from the consignment and re-label. Never copy a sticker.
No photograph	A damage claim arrives and you have nothing to answer it with.	Open the consignment and add photos before it flies.
Customer entered twice	History and balance split across two records.	Search by phone first. Tell management to merge duplicates.
Registering a website request	A tracking number exists for boxes nobody has seen.	Register only when the boxes are on the counter.
Sealing without reading	Wrong cargo flies, and it cannot be undone.	Check the four tiles and any misroute flag, then dispatch.
Never opening Issues & Claims	Cases about your cargo sit unanswered; nothing notifies you.	Check it at the end of every day.

09

Working well

Habits that make the whole chain easier.

Best practice

SCALE FIRST

Weigh, then type

Every figure downstream is the one you measured. Nobody checks it again.

PHOTOGRAPH

Two pictures, always

One of the goods, one of the packed box. It costs ten seconds and settles arguments months later.

LABEL

Stick before it moves

A box that leaves the bench unlabelled is a box nobody can identify.

BATCHES

Do not let a table age

A table left open stops being a batch and becomes a shelf. Watch the oldest-piece figure.

“ ”

LANGUAGE

Type in Chinese freely

Your Chinese is kept exactly as written, and Dar is shown an English rendering beside it.

END OF DAY

Two pages before you leave

Issues & Claims, then Reports. Five minutes, and nothing is left hanging overnight.

10

Questions people ask

The ones that come up in the first week.

Frequently asked

QUESTION	ANSWER
I typed the wrong weight. Can I fix it?	Yes, while the cargo is still in China. Open the consignment and press Edit. After dispatch you cannot — ask management. — —
I registered the same boxes twice.	Delete the duplicate from the panel at the foot of the edit page and write why. Nothing is truly destroyed — the photos and history survive. — —
Why can I not see the price?	By design. Pricing is Finance's. A rate box on this form would put pricing in the hands of whoever is holding the scale.
A customer has no phone number.	You can still register. The record is flagged so somebody confirms it before the cargo lands.
The system says my cargo is on the wrong table.	Assignment is automatic, so that warning should be impossible. Check the cargo category before dismissing it.
Can I use my phone instead of the computer?	Yes. Every screen works on a phone, and the camera is the easiest way to take the cargo photographs.

11

Summary

What to remember when everything else has been forgotten.

The Guangzhou desk in one page

EVERY DAY

Do

Read the attention panel first
· weigh before typing ·
photograph everything · one
label per box · check Issues
& Claims before you leave.

NEVER

Don't

Guess a weight · copy a label
onto a second box · register a
website request as cargo ·
seal a table without reading it
· share your account.

REMEMBER

The rule

Nobody downstream can fix
what you get wrong. The
scale, the camera and the
label are the whole job.

IF YOU REMEMBER ONE SENTENCE

Get the weight, the count and the picture right, and every desk after yours can do its job.
